

Etsy Automation

One-Time Setup Guide

Daily Digital Product Workflow — Moltbot / OpenClaw on Cloudflare Workers

Complete these steps once — then the system runs automatically every day at 9 AM UTC.

~5 min

Etsy Dev App

~10 min

Canva Setup

~3 min

Telegram Bot

~5 min

Deploy Secrets

~10 min

Authorize + Test

Total

setup time:
~33
minutes

What You Need Before Starting

- **Etsy Seller Account** Active Etsy shop at etsy.com/sell
- **Cloudflare Worker** Already deployed — this guide assumes `npm run deploy` already ran once
- **Your Worker URL** e.g. `https://moltbot-sandbox.yourname.workers.dev`
- **Telegram Account** On your phone — for receiving daily notifications
- **Canva Account** Free or Pro. Must have created at least 1 design (becomes your product template)

1a — Register the App

Go to etsy.com/developers and sign in with your Etsy account

- Click "Create a New App" and fill in:

App Name: Your Shop Automation (any name)
App Description: Automated product listing tool
App Website: `https://your-worker.workers.dev`

- In the "Callback URLs" field enter your callback URL:

& Replace `your-worker.workers.dev` with your actual Worker URL

`https://your-worker.workers.dev/etsy/callback`

Submit the form !' you land on your app detail page

1b — Copy Your Credentials

```
KEYSTRING (API Key)  !'  copy as  ETSY_API_KEY
SHARED_SECRET        !'  copy as  ETSY_API_SECRET
```

1c — Find Your Shop ID

- Go to sell.etsy.com !' Settings !' Info & Appearance
- Your numeric Shop ID appears in the URL, e.g.:

```
https://www.etsy.com/your-account/shops/12345678/tools
          ^^^^^^^^^
          ETSY_SHOP_ID = 12345678
```

& New Etsy developer apps go through a review. You'll get an email when approved. You can set up everything else while waiting.

Step 2: Set Up Canva Connect API (~10 min)

& The Canva Connect API is a REST API — no npm install is required. You authenticate once via OAuth, then the script exports your template designs as PDF + PNG files for Etsy.

2a — How the Canva Integration Works

The automation EXPORTS designs from your own Canva account — it does not use Canva's public template library. Your workflow:

- You create 1–4 template designs in Canva (one per product category you want to sell)
- You tell the automation their design IDs (a one-time config step)
- Every day, the automation exports each template as a high-res PDF (the digital product) and PNG (listing photo)

2b — Create Integration in Canva Developer Portal

- Go to canva.com/developers and sign in
- Click "Create an integration" and fill in:

```
Integration name:  Etsy Product Automation
Integration type:  Web app (not "Canva App")
Redirect URL:      https://your-worker.workers.dev/canva/callback
```

- Under Permissions / Scopes, enable:

```
'  design:meta:read      (list your designs)
'  design:content:read   (read design content for export)
'  asset:read            (read design assets)
```

- Click Generate Secret — copy it immediately (it cannot be retrieved again)

```
Client ID      !'  copy as  CANVA_CLIENT_ID
Client Secret !'  copy as  CANVA_CLIENT_SECRET (save this now!)
```

2c — Create Your Product Template Designs in Canva

- Open canva.com and create a design for each product category you want to sell:

Suggested templates:

- Wall Art Printable (US Letter 8.5×11 in, portrait)
- Digital Planner Page (US Letter 8.5×11 in, portrait)
- Social Media Template (1080×1080 px square)
- SVG-style Graphic (any size – for cut file listings)

For each template, copy the Design ID from its URL:

```
Canva URL: https://www.canva.com/design/DAGxxxxxxx/edit
          ^^^^^^^^^^^^^^
          This is the Design ID
```

2d — Add Template IDs to Config

After deploying the Worker and connecting your Canva account (Step 5), run:

```
# From inside the container (via admin panel or SSH):
node /root/clawd/skills/etsy-automation/scripts/canva-designer.js --list-designs

# This prints all your Canva designs with their IDs.
# Then edit the config file:
nano /root/clawd/etsy-automation/config/canva-templates.json

# Replace REPLACE_WITH_YOUR_CANVA_DESIGN_ID with each actual design ID.
```

& You need at least 1 template. The automation will fall back to the template marked "default": true when a product category doesn't have an exact template match.

Step 3: Set Up Telegram Bot (~3 min)

3a — Create a Bot

Open Telegram !' search for @BotFather !' send: /newbot

- Follow prompts to choose a name (anything) and username (must end in "bot")
- BotFather replies with your token:

```
Use this token to access the HTTP API:
1234567890:ABCdefGHIjklMNOpqrSTUvwxyz
!' TELEGRAM_BOT_TOKEN = this value
```

3b — Get Your Chat ID

- Click the link BotFather gave you !' Start (activates the chat)
- Search for @userinfobot !' send /start
- It replies with your ID:

```
Id: 987654321
!' TELEGRAM_CHAT_ID = 987654321
```

Step 4: Add All Secrets to Cloudflare Worker (~5 min)

Run these commands from your project directory (where wrangler.jsonc lives). Each prompts you to paste the value.

```
# Etsy
npx wrangler secret put ETSY_API_KEY
npx wrangler secret put ETSY_API_SECRET
npx wrangler secret put ETSY_SHOP_ID

# Canva
npx wrangler secret put CANVA_CLIENT_ID
npx wrangler secret put CANVA_CLIENT_SECRET

# Telegram
npx wrangler secret put TELEGRAM_BOT_TOKEN
```

5a — Authorize Etsy

- Open your browser and visit:

```
https://your-worker.workers.dev/etsy/auth
```

- You'll be redirected to Etsy — click "Allow Access"
- After approval you'll see a green confirmation page — done

& Make sure you're logged in to the Etsy account that owns your shop before clicking Allow Access.

5b — Authorize Canva

- In your browser visit:

```
https://your-worker.workers.dev/canva/auth
```

- You'll be redirected to Canva — click "Allow Access"
- After approval you'll see a confirmation page
- Check Canva status at: <https://your-worker.workers.dev/canva/status>

5c — Configure Your Canva Template Design IDs

- List your Canva designs from inside the container:

```
node /root/clawd/skills/etsy-automation/scripts/canva-designer.js --list-designs
```

- Edit the templates config with your actual design IDs:

```
nano /root/clawd/etsy-automation/config/canva-templates.json

# Replace each REPLACE_WITH_YOUR_CANVA_DESIGN_ID with a real ID
# e.g. "design_id": "DAGxxxxxxxxxxxxxxxxxx"
```

Step 6 Test the Full Flow (~5 min)

6a — Check Both Status Pages

```
https://your-worker.workers.dev/etsy/status    !' should show "valid"
https://your-worker.workers.dev/canva/status    !' should show "valid" + template count
```

6b — Dry Run (no Etsy posting, no Telegram)

```
node /root/clawd/skills/etsy-automation/scripts/run-daily.js \
  --skip-listing \
  --skip-notify

# Runs Research !' Analyze !' Design (Canva export)
# Check /root/clawd/etsy-automation/designs/ for PDF + PNG files
```

6c — Full Test with Draft

Listings

Listings are created as DRAFT by default — invisible to buyers until you publish in Etsy Studio.

```
node /root/clawd/skills/etsy-automation/scripts/run-daily.js  
  
# Check sell.etsy.com !' Listings !' Drafts for your new listings
```

6d — Test Telegram Notifications

```
node /root/clawd/skills/etsy-automation/scripts/telegram-notifier.js  
# You should receive 2 messages on Telegram within ~10 seconds
```

6e — Enable Auto-Publish (Optional)

```
npx wrangler secret put AUTO_PUBLISH  
# Enter: true  
  
npm run deploy  
# Listings will now go live immediately when created
```

Step 1: Etsy Developer App

- ☐ Registered app at etsy.com/developers
Set App Name, Description, Website, Callback URL
- ☐ Callback URL set to `/etsy/callback` on your Worker
- ☐ Copied `ETSY_API_KEY` (Keystring)
- ☐ Copied `ETSY_API_SECRET` (Shared Secret)
- ☐ Found `ETSY_SHOP_ID`
Numeric ID from sell.etsy.com URL

Step 2: Canva Connect API

- ☐ Created integration at canva.com/developers
Type: Web app (NOT "Canva App")
- ☐ Set redirect URL to `/canva/callback` on your Worker
- ☐ Enabled scopes: `design:meta:read`, `design:content:read`, `asset:read`
- ☐ Copied `CANVA_CLIENT_ID`
- ☐ Copied `CANVA_CLIENT_SECRET`
Can only be seen once at creation time!
- ☐ Created template designs in Canva (at least 1)
One design per product category
- ☐ Noted Design IDs from Canva URLs
Format: `DAGxxxxxxxxxxxxxxxxxx`

Step 3: Telegram

- ☐ Created bot via `@BotFather`, copied token
- ☐ Got Chat ID from `@userinfobot`
- ☐ Sent at least one message to the bot to activate the chat

Step 4: Worker Secrets

- ☐ `npx wrangler secret put ETSY_API_KEY`
- ☐ `npx wrangler secret put ETSY_API_SECRET`
- ☐ `npx wrangler secret put ETSY_SHOP_ID`
- ☐ `npx wrangler secret put CANVA_CLIENT_ID`
- ☐ `npx wrangler secret put CANVA_CLIENT_SECRET`
- ☐ `npx wrangler secret put TELEGRAM_BOT_TOKEN`
- ☐ `npx wrangler secret put TELEGRAM_CHAT_ID`
- ☐ `npm run deploy` (redeployed with new secrets)

Step 5: OAuth Authorization

- ☐ Authorized Etsy at `/etsy/auth`
Saw green confirmation page
- ☐ Authorized Canva at `/canva/auth`
Saw green confirmation page
- ☐ Ran `--list-designs` and added IDs to `canva-templates.json`

Step 6: Testing

- ☐ Both status pages show "valid"
`/etsy/status` and `/canva/status`
- ☐ Dry run succeeded (`--skip-listing --skip-notify`)

PDF + PNG files in /designs/ directory

- ☐ **Draft listings appear in Etsy Studio**
sell.etsy.com !' Listings !' Drafts
- ☐ **Received 2 Telegram test messages**
- ☐ **Decided on AUTO_PUBLISH setting**
Default is draft. Set true to publish immediately

Worker URLs (replace your-worker.workers.dev)

/etsy/auth Start Etsy OAuth (one-time)
/etsy/callback Etsy redirects here after authorization — do not visit directly
/etsy/status Automation status + manual run trigger
/canva/auth Start Canva OAuth (one-time)
/canva/callback Canva redirects here after authorization — do not visit directly
/canva/status Canva connection status
/_admin/ OpenClaw admin panel

Manual Commands (run in the container)

```
# Full daily run
node /root/clawd/skills/etsy-automation/scripts/run-daily.js

# List your Canva designs (get design IDs)
node /root/clawd/skills/etsy-automation/scripts/canva-designer.js --list-designs

# Dry run (no Etsy post, no Telegram)
node /root/clawd/skills/etsy-automation/scripts/run-daily.js --skip-listing --skip-notify

# Individual steps
node /root/clawd/skills/etsy-automation/scripts/etsy-research.js --print
node /root/clawd/skills/etsy-automation/scripts/product-analyzer.js
node /root/clawd/skills/etsy-automation/scripts/canva-designer.js
node /root/clawd/skills/etsy-automation/scripts/etsy-lister.js
node /root/clawd/skills/etsy-automation/scripts/metrics-tracker.js
node /root/clawd/skills/etsy-automation/scripts/telegram-notifier.js
```

All Secret Names

ETSY_API_KEY Etsy app Keystring
ETSY_API_SECRET Etsy app Shared Secret
ETSY_SHOP_ID Numeric Etsy shop ID
CANVA_CLIENT_ID Canva integration Client ID
CANVA_CLIENT_SECRET Canva integration Client Secret
TELEGRAM_BOT_TOKEN Bot token from @BotFather
TELEGRAM_CHAT_ID Your user ID from @userinfobot
AUTO_PUBLISH Optional — set "true" to publish listings immediately (default: draft)

Canva Template Config

```
# File: /root/clawd/etsy-automation/config/canva-templates.json
{
  "templates": [
    {
      "label": "Wall Art Printable",
      "category": "Printable Wall Art",
```

Data Files Location

/root/clawd/etsy-automation/
