

Etsy Automation

One-Time Setup Guide

Daily Digital Product Workflow on Moltbot / OpenClaw

Complete these steps once — then the system runs automatically every day.

~5 min

Etsy Developer App

~5 min

Canva Integration

~3 min

Telegram Bot

~5 min

Deploy Secrets

~5 min

OAuth Authorizations

Total estimated
setup time:
~23 minutes

What You Need Before Starting

- **Etsy Seller Account** Must have an active Etsy shop. If you don't have one, create it at etsy.com/sell
- **Cloudflare Account** Worker already deployed (from the project README)
- **Your Worker URL** e.g. <https://moltbot-sandbox.yourname.workers.dev>
- **Telegram Account** For receiving daily notifications on your phone
- **Canva Account** Free or Pro — needed to access the developer portal

The Etsy API requires you to register a developer app to get an API key and OAuth credentials.

1a — Register a Developer App

- Go to: etsy.com/developers and sign in with your Etsy account
- Click "Create a New App"
- Fill in:

App registration form fields:

App Name: Your Shop Automation (or any name)
App Description: Automated product listing tool
App Website URL: <https://your-worker.workers.dev>

In the "Callback URLs" field, enter your callback URL:

& Replace `your-worker.workers.dev` with your actual Worker URL

```
https://your-worker.workers.dev/etsy/callback
```

- Submit the form — you'll land on your app's detail page

1b — Copy Your Credentials

From the app detail page, copy:

```
KEYSTRING (API Key)  !'  this is your  ETSY_API_KEY
SHARED SECRET        !'  this is your  ETSY_API_SECRET
```

1c — Find Your Shop ID

- Go to Etsy Studio (sell.etsy.com) !' Settings !' Info & Appearance
- Your Shop ID is the number in the URL, e.g.:

```
https://www.etsy.com/your-account/shops/12345678/tools/listings
                        ^^^^^^^^^^
                        This is your ETSY_SHOP_ID
```

& Make sure your Etsy developer app is approved. New apps are reviewed by Etsy — check your email for the approval notification before proceeding

Canva Connect API is used to create original product designs. You need a Canva developer account and integration.

2a — Access Canva Developer Portal

- Go to: canva.com/developers and sign in
- Click "Create an integration"
- Fill in:

Integration form:

```
Integration name:    Etsy Product Automation
Integration type:    Web app
Redirect URL:        https://your-worker.workers.dev/canva/callback
```

2b — Set Required Scopes

- Under "Permissions / Scopes", enable:

```
'  design:content:read    (read designs)
'  design:content:write   (create & edit designs)
'  design:meta:read       (read design metadata)
'  asset:read             (access templates/assets)
```

2c — Copy Your Credentials

```
Client ID      !'  this is your  CANVA_CLIENT_ID
Client Secret !'  this is your  CANVA_CLIENT_SECRET
```

& Canva integrations may require review. If your integration shows "Pending", you can still use it in development mode — it will work for your own account.

2d — Create a Telegram Bot & Get Chat ID

The workflow sends you two Telegram messages each day: one with new product links, one with sales stats.

3a — Create a Telegram Bot

- Open Telegram and search for: @BotFather
- Send the command: /newbot
- Follow the prompts — choose any name and username (must end in "bot")
- BotFather will reply with your bot token:

```
Use this token to access the HTTP API:
1234567890:ABCdefGHIjklMNOpqrSTUvwxyz
```

```
!'  This is your  TELEGRAM_BOT_TOKEN
```

3b — Get Your Chat ID

- Start a chat with your new bot (click the link BotFather gave you !' Start)
- Then search for @userinfobot and send /start to it
- It will reply with your User ID:

```
Your user-name: John
```

```
Id: 987654321
```

```
!'  This is your  TELEGRAM_CHAT_ID
```

- Send a test message to your bot to activate the conversation

Run these commands in your project directory (where wrangler.jsonc lives). You'll be prompted to paste each value.

Run from your project directory terminal:

```
# Etsy credentials
npx wrangler secret put ETSY_API_KEY
npx wrangler secret put ETSY_API_SECRET
npx wrangler secret put ETSY_SHOP_ID

# Canva credentials
npx wrangler secret put CANVA_CLIENT_ID
npx wrangler secret put CANVA_CLIENT_SECRET

# Telegram (TELEGRAM_BOT_TOKEN may already be set)
npx wrangler secret put TELEGRAM_BOT_TOKEN
npx wrangler secret put TELEGRAM_CHAT_ID
```

Verify All Secrets Are Set

```
npx wrangler secret list
```

```
# Expected output should include all of:
```

```
# ETSY_API_KEY, ETSY_API_SECRET, ETSY_SHOP_ID
```

```
# CANVA_CLIENT_ID, CANVA_CLIENT_SECRET
```

```
# TELEGRAM_BOT_TOKEN, TELEGRAM_CHAT_ID
```

Redeploy the Worker

```
npm run deploy
```

```
# Wait for: "Deployed moltbot-sandbox ... (X sec)"
```

5a — Authorize Etsy

This links your Etsy shop to the automation so it can post listings on your behalf.

- Open your browser and navigate to:

```
https://your-worker.workers.dev/etsy/auth
```

- You'll be redirected to Etsy — click "Allow Access"
- You'll return to the worker with a green confirmation page
- Tokens are automatically saved and will refresh without action

& Make sure you are logged in to the correct Etsy account before clicking Allow Access. The bot will post to whichever shop is active.

5b — Authorize Canva

This allows the automation to create and export designs from your Canva account.

- The Canva OAuth flow is similar — visit your worker's /canva/auth route
- Or follow the manual token setup described in SKILL.md if the /canva/auth route is not yet wired up

```
https://your-worker.workers.dev/canva/auth
```

```
# If this 404s, paste tokens manually — see SKILL.md
```

6a — Check Status Page

Visit the status page to confirm OAuth tokens are valid:

```
https://your-worker.workers.dev/etsy/status
```

You should see "OAuth Token: valid" for Etsy

6b — Trigger a Test Run (No Listings)

Run the workflow without actually posting to Etsy first:

```
# Access your container via the sandbox debug panel, then:
node /root/clawd/skills/etsy-automation/scripts/run-daily.js \
  --skip-listing \
  --skip-notify

# This runs: Research !' Analyze !' Design
# Check output in /root/clawd/etsy-automation/
```

6c — Full Test Run with Real Listings (Draft)

Listings are created as DRAFT by default — they won't be visible to buyers until you publish them in Etsy Studio.

```
# Full workflow — creates DRAFT listings
node /root/clawd/skills/etsy-automation/scripts/run-daily.js

# Check your Etsy Studio for draft listings:
# sell.etsy.com !' Listings !' Drafts
```

6d — Verify Telegram Works

```
node /root/clawd/skills/etsy-automation/scripts/telegram-notifier.js

# You should receive 2 messages on Telegram within seconds
```

6e — Enable Auto-Publish (Optional)

Once you're happy with the quality, enable auto-publishing so listings go live immediately:

```
npx wrangler secret put AUTO_PUBLISH
# Enter: true

npm run deploy # redeploy to pick up the new secret
```

Print or use this checklist to track your progress. Check each item as you complete it.

Step 1: Etsy Developer App

- ☐ Registered app at etsy.com/developers
App name, description, website URL filled in
- ☐ Added callback URL
<https://your-worker.workers.dev/etsy/callback>
- ☐ Copied ETSY_API_KEY (Keystring)
- ☐ Copied ETSY_API_SECRET (Shared Secret)
- ☐ Found ETSY_SHOP_ID
Numeric shop ID from Etsy Studio URL

Step 2: Canva Integration

- ☐ Created integration at canva.com/developers
- ☐ Set redirect URL
<https://your-worker.workers.dev/canva/callback>
- ☐ Enabled required scopes
design:content:read/write, design:meta:read, asset:read
- ☐ Copied CANVA_CLIENT_ID
- ☐ Copied CANVA_CLIENT_SECRET

Step 3: Telegram

- ☐ Created bot via @BotFather
Saved the bot token
- ☐ Got Chat ID from @userinfobot
- ☐ Sent at least one message to your bot
Required to activate the chat

Step 4: Worker Secrets

- ☐ `npx wrangler secret put ETSY_API_KEY`
- ☐ `npx wrangler secret put ETSY_API_SECRET`
- ☐ `npx wrangler secret put ETSY_SHOP_ID`
- ☐ `npx wrangler secret put CANVA_CLIENT_ID`
- ☐ `npx wrangler secret put CANVA_CLIENT_SECRET`
- ☐ `npx wrangler secret put TELEGRAM_BOT_TOKEN`
- ☐ `npx wrangler secret put TELEGRAM_CHAT_ID`
- ☐ `npm run deploy` (redeployed worker)

Step 5: OAuth Authorization

- ☐ Authorized Etsy at `/etsy/auth`
Saw green confirmation page
- ☐ Authorized Canva at `/canva/auth`

Step 6: Testing

- ☐ Status page shows "OAuth Token: valid"
Visit </etsy/status>
- ☐ Test run without listing succeeded
`--skip-listing --skip-notify`
- ☐ Draft listings appeared in Etsy Studio
- ☐ Received Telegram test messages
- ☐

Decided on auto-publish setting

Default: drafts. Set `AUTO_PUBLISH=true` to go live automatically

```
09:00 UTC  !'  Daily workflow runs automatically
            !'  Research !' Analyze !' Design !' List !' Metrics !' Telegram
```

Key URLs (replace your- worker.workers.dev)

/etsy/auth Start Etsy OAuth authorization
(one-time)
/etsy/status Check automation status +
manual trigger
/etsy/callback OAuth callback (Etsy
redirects here — do not visit directly)
/_admin/ OpenClaw admin panel

Manual Commands (run inside the container)

```
# Full daily run
node /root/clawd/skills/etsy-automation/scripts/run-daily.js

# Research only
node /root/clawd/skills/etsy-automation/scripts/etsy-research.js --print

# Re-run without posting to Etsy
node /root/clawd/skills/etsy-automation/scripts/run-daily.js --skip-listing

# Test Telegram only
node /root/clawd/skills/etsy-automation/scripts/telegram-notifier.js

# Check shop metrics
node /root/clawd/skills/etsy-automation/scripts/metrics-tracker.js
```

Secret Names Reference

ETSY_API_KEY Etsy app Keystring
ETSY_API_SECRET Etsy app Shared Secret
ETSY_SHOP_ID Numeric Etsy shop ID
CANVA_CLIENT_ID Canva integration Client

ID

CANVA_CLIENT_SECRET Canva integration
Client Secret

TELEGRAM_BOT_TOKEN Telegram bot token
from @BotFather

TELEGRAM_CHAT_ID Your Telegram user ID
from @userinfobot

AUTO_PUBLISH Optional: set to "true" to
publish listings immediately
